Subject: Comments to RIN 2590-AA53 EIS Scoping Comments

Scenarios should be based on factual data/ information with complete disclosure as to methods. Science data should be based on the region and ecology involved, not a general conclusion or on facts not applicable.

Impacts on delivery ie Solar Desert Installations and Transmission Lines should be included as part of the impacts.

Fire Safety and Personnel are important to aspects of Clean Energy.

Updated and available mapping should be used for Geology and Seismic Impacts.

The number and location of monitoring stations for measurement of any impact should be clearly stated ie Air Quality Monitoring.

Water conservation impact should include increased pricing effects on conservation.
