I have been in favor of PACE since I first heard about it a couple of years ago and I am still waiting for it to be resurrected as our long awaited solution to cheaper/cleaner energy as well as a solution to the jobs crisis. By giving this method a chance we can jump start the economy and clean up the environment at once and stimulate enormous wealth in the US. Everyone will be able to contribute to the push for solar and wind power technology without superhuman efforts by the federal government to try to push past the oil and nuclear agencies. Once this initiative is passed it will have a life of it's own and will not need to be propped up with other subsidies from the government as it is now.

Please push for this much needed program to finally let the people choose their own energy future.

Sincerely,
Dianne Richardson
