Ladies and Gentlemen:

Thank you for the opportunity to comment on the “Credit Risk Retention” proposed rule as required by Section 941 of the Dodd Frank Act (P.L. 111-203). Select Milwaukee, Inc. respectfully puts forth our recommendations and concerns regarding this proposed rule, specifically the definition of a Qualified Residential Mortgage (ORM).

Among Select Milwaukee's business lines is homeownership promotion. Over the past 10 years nearly 2,000 low- and moderate-income families have achieved homeownership through Select Milwaukee's counsel and guidance. These homebuyers secured well-underwritten, low-downpayment mortgages. Because they were prepared for the responsibilities and challenges of homeownership, the performance of their loans is significantly better than their "non-counseled" counterparts in Milwaukee, Wisc.

It is a 20-year experience and expertise context from which we provide comments on these areas relevant to the proposed QRM definition:

1. Eligible loans
2. Borrower credit history
3. Down-payment requirement
4. Homeownership education and counseling
5. Homeownership preservation counseling and default mitigation

Eligible Loans

Select Milwaukee recognizes the deleterious effects of so-called "piggyback" loans that played such a large role in creating the housing and economic crises. However, not all secondary or subordinate loans are created equal or that by virtue of being secondary alone indicates a level of default potential. Our experience is decidedly to the contrary. Select Milwaukee has been using various forms of public and private sector secondary loans, including local and state government lending programs and federal lending programs created by HUD, the State of Wisconsin and Milwaukee-area employers, that are low- or no-interest rate and/or forgivable, are high performing and that are provided on the condition that borrowers receive comprehensive homebuyer education and counseling to ensure sustainable homeownership. Therefore, we recommend that these public-sector and employer-provided subordinate loans not be prohibited as part of the QRM eligible loan definition.

Borrower Credit History

Select Milwaukee agrees with the proposed rule that a credit score threshold should not be part of the QRM definition. A credit history demonstrating borrower behavior around debt is of significant importance. However, a firm credit score threshold is not given the factors that contribute to a credit score that are of no predictive value to the likelihood of a person repaying a debt. As noted in the discussion of QRM Eligibility Criteria the payment history is a much better indicator of ability to manage credit.

Down-Payment Requirement

In the strongest possible terms, Select Milwaukee disagrees with the proposed down payment requirement offered in the rule. Requiring down payments of 10 or 20 percent is deemed by some as "getting back to basics." However, well-underwritten low down payment home loans have been a significant and safe part of the mortgage finance system for decades and have been integral to the success of Select Milwaukee's homebuyers. The proposed QRM exemption

imposes minimum down payments of 10 or 20 percent, and equity requirements for refinancing borrowers of 25 percent or 30 percent. Select Milwaukee disagrees with these down payment requirements and offers an alternative (see below).

A 10 or 20 percent down payment requirement for the QRM means that even the most creditworthy and diligent first-time homebuyer cannot qualify for the lowest rates and highest quality products in the market. Even 10 percent down payments create significant barriers for borrowers, especially in higher cost markets (see Attachment 1) but also moderate-cost markets like Milwaukee, Wisc. Otherwise creditworthy low- and moderate-income potential homebuyers, including thousands of African-American and Hispanic families in Milwaukee, will likely be compelled to defer their aspirations for homeownership, be forced to turn to government-guaranteed loan programs or enter the non-QRM market, with higher-priced, lower-quality and potentially riskier product features *without adding a commensurately greater degree of sustainability*.

Select Milwaukee believes that with the proposed requirements, responsible consumers who maintain good credit and seek safe loan products will be driven into more expensive mortgages under the terms of the proposed rule simply because they do not have 10 or 20 percent in down payment or even more equity for refinancing. These mortgages will be more expensive for consumers because the capital and other costs of retaining risk will be passed onto them, if the private market chooses to offer loans outside of the QRM standard at all. No doubt an unintended consequence, the proposal unfortunately penalizes qualified, low-risk borrowers, families whose entrance to the housing market would contribute to their local and regional economies. The QRM should be redesigned to align with Congressional intent: encourage sound lending behaviors that reduce future defaults without harming responsible borrowers and lenders.

In addition, an analysis of loan performance data from CoreLogic's servicing databases on loans originated between 2002 and 2008 shows that boosting down payments in 5 percent increments has only a negligible impact on default rates, while it significantly reduces the pool of borrowers that would be eligible for the QRM standard. Table 1 and Attachment 2 show the default performance of a sample QRM definition based on the following attributes of loans: (Fully documented income and assets; fixed-rate loans, or 7-year or greater initial period ARMs; no negative amortization; no interest only loans; no balloon payments; 41 percent total debt-to-income ratio; mortgage insurance on loans with 80 percent or greater loan-to-value ratios; and maturities no greater than 30 years).

These sample QRM criteria were applied to more than 20 million loans originated between 2002 and 2008, and default performance is measured by origination year through the end of 2010. While loans with 5% down payments (or 5% equity) are certainly riskier than loans with 20% down/equity, the data in Table 1 and the chart in Attachment 2 show that low down payment loans that follow the strong underwriting and product standards outlined above can be exempted from risk retention without exposing investors or the broader housing market to undue risk. In other words, after applying the strong underwriting standards in the sample QRM definition, moving from a 5 percent to a 10 percent down payment requirement reduces the overall default experience by an average of only two- to three-tenths of one percent for each cohort year – negligible at best. However, the increase in the minimum down payment from 5 percent to 10

percent would eliminate from 7 to 15 percent of borrowers from qualifying for a lower rate QRM loan – statistically significant. Similarly, increasing the minimum down payment even further to 20 percent, as proposed in the QRM rule, would amplify this disparity by knocking 17 to 28 percent of borrowers out of QRM eligibility, with only small improvement in default performance of about eight-tenths of one percent on average. This lopsided result compromises the intent of the QRM provision in Dodd-Frank, which is to assure clear alignment of interests between consumers, creditors and investors without imposing unreasonable barriers to financing of sustainable mortgages. The analysis also demonstrates that although important to the home buying transaction, down payments are not the best indicator of default in the underwriting process.

Table 1
Sample QRM Analysis: Impact of Raising Down Payments Requirements
on Default Rates and Borrower Eligibility

Origination Year	2002	2003	2004	2005	2006	2007	2008
Reduction in default rate* by increasing QRM down payment from 5% to 10%	0.2%	0.1%	0.3%	0.3%	0.2%	0.5%	0.2%
Proportion of borrowers not eligible for QRM at 10% Down	7.6%	6.6%	9.0%	8.4%	10.9%	14.7%	8.4%
Reduction in default rate* by increasing QRM down payment from 5% to 20%	0.6%	0.3%	0.7%	0.8%	0.8%	1.6%	0.6%
Proportion of borrowers not eligible for QRM at 20% Down	19.2%	16.7%	23.0%	22.9%	25.2%	28.2%	20.7%

* Default = 90 or more days delinquent, plus in process of foreclosure, plus loans foreclosed.

Source: Data from CoreLogic, Inc. Analysis by Vertical Capital Solutions for Genworth Financial and the Community Mortgage Banking Project.

The bottom line is that requiring a 10 or 20% down payment as an overlay to already-strong underwriting standards produces only minor improvement in market-wide default performance, but has a major adverse impact on access by creditworthy borrowers to the lower rates and safe product features of the QRM. Select Milwaukee believes this is an unnecessary and unreasonable trade-off that would have a disproportionate impact on moderate-income and minority families and would undermine efforts to create a sustainable housing recovery.

Nevertheless, Select Milwaukee believes strongly that borrowers should have financial equity in the home buying transaction. While we consider a 20%, 10% or even 5% down payment requirement to be excessive especially because it does not impact the default potential of the home buyer, a homeowner who has a vested financial commitment to the purchase of a home is important. We therefore offer that the QRM definition include a down payment requirement of 3% – saved cash only from the homebuyer. In our experience, though small, the cash contribution is behaviorally material and demonstrates homebuyer commitment to the transaction and is predictive of sustainability.

From among our nearly 2,000 successful homeowners we point to the risk mitigation aspects of quality homebuyer education and counseling. We offer that the QRM definition also include a 1% down payment requirement – saved cash only from the homebuyer for any loan where the homebuyer has successfully completed homebuyer education and counseling¹ as outlined by the National Industry Standards for Homeownership Education and Counseling¹ and provided by Select Milwaukee.

Homeownership Education and Counseling

Homeownership is the single largest source of wealth for most Americans. Academics have shown that homeownership is associated with improved child education, higher neighborhood real estate values, increased savings and even reduced teen pregnancy rates.² Most benefits of homeownership derive from personal and financial security.

Homeownership education and counseling programs such as those offered by Select Milwaukee permit borrowers to make good choices in finding homes they can afford and sustain. Counseling programs that meet National Industry Standards for Homeownership Education and Counseling cover topics integral to homeownership sustainability – from understanding credit and savings; shopping for a mortgage; housing discrimination; home maintenance; and predatory lending. Organizations like Select Milwaukee provide homeowners with a thorough and unbiased review of their financial situation and the types of mortgage products that may best suit their needs. Quality counseling provides tools to determine whether homeownership is an appropriate housing option in the first place.

Pre-purchase education and counseling has been proven to help reduce mortgage delinquencies among homebuyers. Several studies that examined the effect of homeownership education and counseling on default rates found lower delinquency and default rates. One study of Freddie Mac's affordable lending program provides direct empirical evidence of the value of counseling and education, concluding that some types of pre-purchase education and counseling have a significant impact on mortgage delinquency rates. Based on a group of 34,000 loans from Freddie Mac's portfolio that received this service, 90-day delinquency rates were lowered by 19% for educated borrowers overall. Borrowers who received individual counseling experienced a 34% reduction in delinquency rates, while borrowers who received classroom and home-study education obtained 26% and 21% reductions in delinquency.³

Select Milwaukee asserts that homeownership education and counseling is an equally important, highly relevant factor in the underwriting process. We encourage you to consider incorporating homebuyer education and counseling into the (1) down payment requirement, as outlined above, and (2) as an additional requirement of the default mitigation eligibility criteria as outlined below.

² Dietz, Robert D. "The Social Consequences of Homeownership" (Ohio State University: 2003).

³ Harad, Abdighani and Peter Zorn, "A Little Knowledge is a Good Thing: Empirical Evidence of the Effectiveness of Pre-Purchase Counseling" (Harvard Joint Center for Housing Studies, 2003).

Default Mitigation

Coordination between the borrower and the servicer in the case of delinquency is critically important in order to avoid future delinquencies and possible foreclosure. Homebuyer education and counseling organizations are trusted advisors to help homeowners become current, and help the servicer maintain a consistent cash flow. For example, we suggest that the final rule allow for a delinquent homeowner to receive post-purchase counseling: when a homeowner becomes 45 days delinquent (or term to be determined), the servicer would refer that homeowner to a HUD-approved counseling agency that has adopted the National Industry Standards noted above for post-purchase counseling. It is an appropriate and cost-savings service to the servicer that justifies the servicer absorbing the cost of this counseling.

An Urban Institute study on National Foreclosure Mitigation Counseling program's (NFMC) effectiveness concluded that the program was successful in both helping homeowners cure existing foreclosures and reducing the likelihood that counseled homeowners would fall back into foreclosure:⁴

- During the first two years of the NFMC program, counseled homeowners were 70% more likely to get out of foreclosure and avoid a foreclosure sale than if they had not received NFMC counseling.
- On average, NFMC clients who received loan modifications in the first two program years reduced their monthly payments by \$555; this is \$267 more in reduction than if they had not received NFMC counseling.
- For clients counseled in 2008, NFMC counseling produced a 45% increase in the relative odds that a post-counseling modification would be sustained through 2009. The sustainability of modifications was greater than for homeowners without counseling because counseled homeowners received larger monthly payment reductions and counseling assistance with financial management.
- For clients counseled in 2008, the odds of making their loans current were 53% higher if they received counseling. Counseling produced payment reductions and financial planning assistance that helped move people from serious delinquency or foreclosure to a sustained cure of their mortgages.

Conclusion

Strong and sustainable national economic growth will depend on creating the right conditions needed for a housing recovery. The prohibitively high minimum down payment/equity requirements and other narrow provisions of the proposed QRM will impair the ability of millions of households to qualify for low-cost financing, and could frustrate efforts to stabilize the housing market. We applaud your monumental efforts to date, and for the equally monumental effort before you to strike the appropriate balance in weighing all of these vastly important issues.

Low Down Payments not a Major Driver of Default when Underwritten Properly

The red bar shows the performance of mortgages originated from 2002 – 2008 that do not meet all of the standards and features outlined below in the note. The other bars show the performance of mortgages that meet all of the sample QRM product and underwriting features. Within this second group of “QRM” bars, the blue bar shows how loans performed that met all these standards, plus had a 20 percent down payment or more; the green bar shows loans that the met all the standards plus had a down payment of at least a 10%; the purple bar shows these loans with at least 5% down. Naturally, loans with strong standards and at least 20% down performed best. However, the chart also shows clearly that lower down payment loans can be included in a strong QRM framework without exposing investors or the broader market to excessive risk.

IMPACT OF INCREASING MINIMUM DOWNPAYMENT ON DEFAULT RATES FOR LOANS THAT MEET SAMPLE QRM STANDARD

Source: Vertical Capital Solutions of New York, an independent valuation and advisory firm conducted this analysis using loan performance data maintained by First American CoreLogic, Inc. on over 30 million mortgages originated between 2002 and 2008. Note: Default rates are by origination year, through the end of 2010. The sample QRM in this analysis is based on fully documented income and assets; fixed-rate or 7-year or greater ARMs; no negative amortization; no interest only loans; no balloon payments; 41% total debt-to-income ratio; mortgage insurance on loans with 80% or greater loan-to-value ratios; and maturities no greater than 30 years.
